Art Unit: 1797

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James D.DeCamp on 09/10/2010.

The application has been amended as follows:

Claim 1. A method for capacitive detection of the presence of target sample on a substrate with at least a pair of electrodes having a non-conductive surface layer, comprising the steps of:

~~-binding a target sample, having a deposition initiator, to selective binding sites on the substrate, a conductive label the target sample being bound onto said deposition initiator directly or indirectly labelled with conductive labels,~~

~~-sensing the presence of the bound conductive labels to a binding site to thereby determine the presence of the target sample,~~

~~wherein the sensing step is a capacitive detection that is carried out by contacting the conductive label bound to said target sample to said non-conductive surface layer of said electrodes on said substrate a non-ohmic contacting, capacitive detection of the presence of the conductive labels using electrodes having non-conducting surfaces.~~

(a) binding a target sample to a selective binding site on the substrate, a conductive label being bound to the target sample, the conductive label having a direct or indirect coupling to the target sample; and

(b) sensing the presence of the bound conductive label to the binding site to thereby determine the presence of the target sample, wherein the sensing step is a capacitive detection that is carried out by contacting the conductive label bound to said target sample to said non-conductive surface layer of said pair of electrodes on said substrate.

Claims 10-27. Canceled.

2. The following is an examiner's statement of reasons for allowance: The prior art of record does not teach or fairly suggest a method of capacitive detection of target sample labeled with a conductive label, the labeled target bound to a binding site on a substrate, the conductive label contacting electrodes of a pair, the electrodes comprising a non-conducting surface.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. I. Besnard et al., U.S. Patent Application Publication 2009/0084162; A-A. Dhirani and Y.
